A growing demand for organics, and the near-total reliance by US farmers on genetically modified corn and soybeans, is driving a surge in imports from other nations where crops largely are free of bioengineering. Imports such as corn from Romania and soybeans from India are booming, according to an analysis of US trade data released Wednesday by the Organic Trade Association and Pennsylvania State University. That shows a potential market for US growers willing to avoid the use of artificial chemicals and genetically modified seeds, said Laura Batcha, chief executive officer of the association, which includes Whole Foods Market Inc., Whitewave Foods Co. and Earthbound Farm LLC. The report is "a help-wanted sign" for US farmers, Batcha said. "There are market distortions that are pretty striking." Most of the corn and soybean shipments become feed for chickens and cows so they can be certified organic under US Department of Agriculture guidelines. Organic poultry and dairy operators shun feed made with seeds from Monsanto Co. and other domestic suppliers in favor of foreign products even as the US remains the world's top grower of corn and soybeans. As a result, imports to the US of Romanian corn rose to \$11.6 million in 2014 from \$545,000 the year before. Soybean imports from India more than doubled to \$73.8 million. Rising consumer demand in what's been a niche market is creating shortages, pushing companies that supply farms needing organic feed to seek out foreign sources. About 90% of US corn and soy is bioengineered, thus automatically ineligible for the organic label.

What is driving a surge in imports from other nations?

Options:

- 1) A growing demand for organics.
- 2) A rumor spread by US Trade Data.
- 3) Newly launched genetically modified seeds.
- 4) Push from export-import companies.

Correct Answer: A growing demand for organics. **Candidate Answer:** A growing demand for organics.

The Divine Comedy is a narrative poem describing Dante's imaginary journey. Midway on his journey through life Dante realizes he has taken the wrong path. The Roman poet Virgil searches for the lost Dante at the request of Beatrice; he finds Dante in the woods on the evening of Good Friday in the year 1300 and serves as a guide as Dante begins his religious pilgrimage to find God. To reach his goal, Dante passes through Hell, Purgatory and Paradise. The Divine Comedy was not titled as such by Dante; his title for the work was simply Commedia or Comedy. Dante's use of the word "comedy" is medieval by definition. To Dante and his contemporaries, the term "comedy" meant a tale with a happy ending, not a funny story as the word has since come to mean. Dante and Virgil enter the wide gates of Hell and descend through the nine circles of Hell. In each circle they see sinners being punished for their sins on earth; Dante sees the torture as Divine justice. Dante first travels through circles of hell and then through 3 rings before entering the 8th circle. Then there are 9 bowge before Dante reached the 9th circle. After 9th circle Dante has to travel 4 more regions. On Easter Sunday, Dante emerges from Hell. Through his travels, he has found his way to God and is able, once more, to look upon the stars.

The bird life of the Tarai region is much the same as that found in the Malabar Coast and Assam, and includes horn-bills, barbets, fruit-pigeons, bulbuls and woodpeckers. Along the cultivated areas and on the edge of the forests are found some of the more common birds of the Indian plains, and many wading birds and water fowls spend the winter among its streams and marshes. The cold season stimulates the migration of many species of birds from Tibet such as wild ducks and cranes, which breed in the mountains and descend to the plains for a brief change. The Central Region is described as a clusterous space of mountains varying in elevation from 4,000 to 10,000 feet with a range of temperature varying from ten to twelve degrees lower the Tarai. It includes the Mahabharat range of mountains which rise to 8,000 feet to form a continuous barrier across Nepal from east to west. At intervals, this mountain wall is pierced by the gorges of the transverse rivers of the Seven Kosis, or the Seven Gandaks, or the noble river Karnali. Between the Mahabharat range and the main Himalayan chain, there are many populous valleys like Dumja, Kathmandu, Pokhara, and many others where the majority of the population is densely concentrated. The fauna of this central zone is characteristically Himalayan. Many of the species occurring in this region are peculiar to Nepal alone. Such animals as the ferret, badger, raccoon, crestless porcupine, etc., do not occur in the Indian peninsula. The whole genera of such birds as yuhina, siva, minla, ixulu, etc., are nearly, if not wholly, restricted to this region. The majority of reptiles occurring in this zone are purely Himalayan species.

What does the cold season stimulates?
