$300 \sqrt{2}=0.6 \times V_{d c}$
$\therefore V_{d c}=500 \sqrt{2}$
53. The range of K for which all the roots of the equation $S^{3}+3 S^{2}+2 S+K=0$ are in the left half of the complex s-plane is
(A) $0<\mathrm{K}<6$ (
(B) $0<K<16$
6 (C)
6<K $<36$
(D) $6<\mathrm{K}<$ 16
Key: (A)
Exp: 32 C.E $=S^{3}+3 S^{2}+2 S+K=0$
If system to be stable
$K>0 \cap 6>K$
$0<K<6$
54. The eigen values of the matrix given below are
$\left[\begin{array}{ccc}0 & 1 & 0 \\ 0 & 0 & 1 \\ 0 & -3 & -4\end{array}\right]$
(A) $(0,-1,-3)$
(B) $(0,-2,-3)$
(C) $(0,2,3)$
(D) $(0,1,3)$

Key: (A)
Exp: Characteristic equation is
$\left|\begin{array}{ccc}-\lambda & 1 & 0 \\ 0 & -\lambda & 1 \\ 0 & -3 & -4-\lambda\end{array}\right|=0$
$\Rightarrow-\lambda\left(4 \lambda+\lambda^{2}+3\right)=0 \Rightarrow \lambda(\lambda+1)(\lambda+3)=0$
$\Rightarrow \lambda=0,-1,-3$ are the Eigen values
55. A 3-phase 50 Hz generator supplies power of 3 MW at 17.32 kV to a balanced 3-phase inductive load through an overhead line. The per phase line resistance and reactance are
$0.25 \Omega$ and $3.925 \Omega$ respectively. If the voltage at the generator terminal is 17.87 kV , the power factor of the load is $\qquad$ -.
a) 0.75
b) 1.435
c) 2
d) 3.12

## Q. No. 1-5 Carry One Mark Each

1. There are five buildings called $\mathrm{V}, \mathrm{W}, \mathrm{X}, \mathrm{Y}$ and Z in a row (not necessarily in that order). $V$ is to the West of $W$, $Z$ is to the East of $X$ and the West of $V, W$ is to the West of Y . Which is the building in the middle?
(A) V (B) W (C)

Key: (A)

Exp: From the given data, the following is formed

$\therefore$ The building ' V ' is in the middle
2. Saturn is $\qquad$ to be seen on a clear night with the naked eye.
(A) enough bright
(B) bright enough
(C) as enough bright
(D) bright as enough

Key: (B)
The word 'enough' as an adverb falls after the adjective so 'bright enough' is the right answer.
3. Choose the option with words that are not synonyms.
(A) aversion, dislike
(B) luminous, radiant
(C) plunder, loot
(D) yielding, resistant

Key: (D)
'Yielding' means tending to do whereas 'resistant' means opposed to something, so both are not synonyms.
4. There are 3 red socks, 4 green socks and 3 blue socks. You choose 2 socks. The probability that they are of the same color is
(A) $1 / 5$ (B) $7 / 30$
(C) $1 / 4$
(D) $4 / 15$
Key: (D)
Exp:
$\frac{{ }^{3} C_{2}+{ }^{4} C_{2}+{ }^{3} C_{2}}{{ }^{10} C_{2}}=\frac{12}{45}=\frac{4}{15}$
5. A test has twenty questions worth 100 marks in total. There are two types of questions. Multiple choice questions are worth 3 marks each and essay questions are worth 11 marks each. How many multiple-choice questions does the exam have?

```
(A) 12 (B) 15 (C) 18 (D) 19
Key: (B)
Exp:
x+y=20 x=MCQ
3x+11y=100 y= essay type

## Q. No. 6-10 Carry Two Marks Each

6. An air pressure contour line joins locations in a region having the same atmospheric pressure. The following is an air pressure contour plot of a geographical region. Contour lines are shown at 0.05 bar intervals in this plot.

If the possibility of a thunderstorm is given by how fast air pressure rises or drops over a region, which of the following regions is most likely to have a thunderstorm?
(A) P (B) Q (C) R (D) S

Key: (C)
Exp:

| Region | Air pressure difference |
| :--- | :--- |
| $P$ | $0.95-0.90=0.05$ |
| $Q$ | $0.80-0.75=0.05$ |
| $R$ | $0.85-0.65=0.20$ |
| $S$ | $0.95-0.90=0.05$ |

In general thunder storms are occurred in a region where suddenly air pressure changes (i.e.,) should rise (or) sudden fall of air pressure. From the given contour map in „R" region only more changes in air pressure. So, the possibility of a thunder storms in this region.
So option (C) is correct.
7. There are three boxes. One contains apples, another contains oranges and the last one contains both apples and oranges. All three are known to be incorrectly labelled. If you are permitted to open just one box and then pull out and inspect only one fruit, which box would you open to determine the contents of all three boxes?
(A) The box labelled 'Apples'
(B) The box labelled „Apples and 'Oranges'
(C) The box labelled 'Oranges'
(D) Cannot be determined

Key: (B)
Exp: The person who is opening the boxes, he knew that all 3 are marked wrong.

Suppose if 3 boxes are labelled as below.

(1) Apples

(2) Oranges

(3) Apples \& Oranges

If he inspected from $\operatorname{Box}(1)$, picked one fruit, found orange, then he don't know whether box contains oranges (or) both apples and oranges.
Similarly, if he picked one fruit from box (2), found apple then he doesn't know whether box contain apples (or) both apples and oranges.
But if he picked one fruit from box (3), i.e., labelled is "apples and oranges", if he found apple then he can decide compulsorily that box(3) contains apples and as he knew all boxes are labelled as incorrect, he can tell box(2) contains both apples and oranges, box(1) contain remaining oranges. So, he should open box labelled "Apples and Oranges" to determine contents of all the three boxes.
8. "We lived in a culture that denied any merit to literary works, considering them important only when they were handmaidens to something seemingly more urgent namely ideology. This was a country where all gestures, even the most private, were interpreted in political terms."
The author's belief that ideology is not as important as literature is revealed by the word:
(A) 'culture'(B) 'seemingly'
(C) 'urgent' (D) 'political'

Key: (B)
It appears to be ' $B$ ', so the right option is ' $B$ '.
9. $X$ is a 30 -digit number starting with the digit 4 followed by the digit 7 . Then the number $3 X$ will have
(A) 90 digits (B) 91 digits (C) 92 digits (D) 93 digits Key: (A)
Exp: $X=(47 \ldots \ldots \ldots)$.30 digits
Suppose (47) $=2+2+2$ digits in (47) ${ }^{3}$
Similarly $(47)^{3}=$ contains $30+30+30$ digits $=90$
10. The number of roots of $e^{x}+0.5 x^{2}-2=0$ in the range $[-5,5]$ is
(A) 0 (B) 1 (C) 2 (D) 3

Key: (C)
Exp: $\mathrm{f}(\mathrm{x})=e^{x}+0.5 x^{2}-2=0$
$f(-5)=10.50 ; f(-4)=6.01, f(-2)=0.135 ; f(-1)=-1.13$;
$f(0)=-1.50 ; f(1)=1.21, f(2)=7.38 ; f(3), f(4, f(5)$ also $+v e$.
$\therefore$ As there are 2 sign changes from + ve to -ve and -ve to $+v e$, two roots will be there in the range $[-5,5]$.
