## Solutions

1. Ans. C

Total number of girls enrolled in Painting in Institutes A and $C$ together $=250+150=400$
Total number of girls enrolled in Stitching in Institutes D and E together $=250+325=575$
$\therefore$ Required ratio $=400: 575=16: 23$
2. Ans. B

Total number of girls enrolled in Stitching in all the institutes together
$=325+250+50+250+325=1200$
Number of girls enrolled in Stitching in Institute $B=250$
$\therefore$ Required percentage
$=\frac{250}{1200} \times 100=20.8 \approx 21 \%$
3. Ans. A

Number of girls from all institutes enrolled in
Painting $=250+225+150+175+300=1100$
Number of girls from all institutes enrolled in Stitching
$=1200$
Number of girls from all institutes enrolled in
Dancing $=150+200+75+400+350=1175$
$\therefore$ Required ratio $=1100: 1200: 1175=44: 48: 47$
4. Ans. E

Total number of girls in Institute
$A=250+325+150=725$
Number of girls enrolled in Dancing in Institute
$A=150$
Hence, required percentage
$=\frac{150}{725} \times 100=20.69 \%$

No relation can be established between p \& q.
I. $9 p^{2}-(9+12) p+12=0$
$9 p^{2}-9 p-12 p+12=0$
$9 p(p-1)-12(p-1)=0$
$(9 p-12)(p-1)=0$

II. $18 q^{2}-50 q+32=0$
$9 q^{2}-25 q+16=0$
$9 q^{2}-9 q-16 q+16=0$
$9 q(q-1)-16(q-1)=0$
$(q-1)(9 q-16)=0$
$\therefore q=\frac{16}{9}, 1$
We cannot determine the exact relation.
since in case : $p=4 / 3$ and $q=1$ then $p>q$
but if : $p=1$ and $q=16 / 9$., then $q>p$

$2(A+B+C)$ 's 1-day work $=1 / 30+1 / 24+1 / 20=1 / 8$
$A+B+C$ 's 1 day work $=1 / 16$
Work done by $A, B$ and $C$ in 10 days $=10 / 16=5 / 8$
Remaining work $=1-5 / 8=3 / 8$
A's one day work $=1 / 16-1 / 24=1 / 48$
$1 / 48$ work is done by $A$ in 1 day
So $3 / 8$ work will be done in $48 *(3 / 8)=18$ days

Capital of $A$ is employed in business for 10 months $=$ Rs 16000
Capital of $B$ is employed for 8 months $=5 / 8 \times 16000=$ Rs 10000
Capital of C is employed for 6 months $=$ Rs 8000
Thus the ratio of distribution of profit $=\mathrm{A}: \mathrm{B}: \mathrm{C}$
$=16000 \times 10: 10000 \times 8: 8000 \times 6=160: 80: 48$
= 10:5:3
Therefore the share of $B=5 / 18 \times 6336=$ Rs 1760
Hence Option A is correct
40. Ans. D

Suppose, Income of $B=₹ x$
Income of $\mathrm{A}=\frac{150}{100} \times x=₹ \frac{3 x}{2}$
Income of $C=\frac{120}{100} \times \frac{3 x}{2}$
$=\frac{6}{5} \times \frac{3 x}{2}=₹ \frac{9 x}{5}$
$\therefore x+\frac{3 x}{2}+\frac{9 x}{5}=86000$
$\frac{10 x+15 x+18 x}{10}=86000$
$43 x=860000$
$x=20000$
So, income of $\mathrm{C}=\frac{9}{5} \times 20000$
= ₹ 36000
