So, here are short notes on Common Names and Formulas of Important Chemical Compounds which will be useful for upcoming SSC as well as other competitive exams as well.

Common Names and Formulas of Important Chemical Compounds

Chemical formulas provide a lot of information about chemical substances, such as how many and what atoms they are made of, as well as the way the atoms are arranged.

A **compound** is a substance made up of a definite proportion of two or more elements. With the help of Chemical formulas, you can check number of atoms and elements in the compound.
