Comprehension:

Direction (16–20): Read the following passage and answer the questions given after it.

Soon nine prisons across Uttar Pradesh could see inmates receive training in developing crop seeds, even as prisoners in 12 other jails learn vermicomposting, as part of an initiative of the Prison Department, Seed Development Corporation and Agriculture Department.

Besides providing inmates an extra source of income inside the prison, authorities are hopeful the skills they pick up could prove handy for them after their release. For now, inmates with an agricultural background and serving short-term sentences will be selected for the training.

Around 30 inmates each in nine prisons would learn development of crop seeds, while five each in 12 jails would be trained in vermicomposting. A Memorandum of Understanding (MoU) in this regard was signed between the Managing Director (MD) of the Uttar Pradesh Seed Development Corporation, Director of the Agriculture Department and Additional Director General (ADG), Prisons.

Officials estimate around Rs.35,000 can be earned per hectare in seed production, after removing the investment cost.

ADG (Prisons) Chandra Prakash said "The main motive is to make positive and constructive use of the time of inmates, develop their skills and give them a way to make an earning when they are released".

Nine prisons which had land where inmates could grow crops were selected for seed development training. Similarly, the 12 prisons selected for vermicompost training have cattle and sell dairy products.

"The training for seed development is not that rigorous and just one day is enough to teach someone. However, apart from the one-day training by the district agriculture officer or the district deputy agriculture director, seed development officials and the Seed Certification Department would hold inspections to check the development of seeds. The same would be the case with vermicomposting," Seed Corporation MD Santosh Khare said.

"Prisons would have to purchase the fertilisers and pesticides themselves, but the foundation seeds would be provided by us on credit. After the certified seeds (the final produce, to be used by farmers as seeds) are ready, we will do two quality tests and buy at the current market rate. We would also take the seed leftovers and sell them. Later we will debit the credit amount and pay the prisons accordingly.

That amount would be distributed to inmates who produced the seeds. The vermicompost would be sold by the prison itself," the MD added.
