

ESE 2021 Paper-2

Mechanical Engineering

Questions

ESE 2021 PYSP

| 1. | Consider the following | statements regarding | | A. 1334 |
|----|--------------------------|--------------------------|----|--------------|
| | mechatronics systems: | | | C. 105 |
| | 1. The anti-lock brakes | s on a car are a simple | 6. | The fol |
| | example of a real time | computing system. | | represe |
| | 2. The completion of a | n operation after its | | |
| | deadline is considered | useless in soft real | | |
| | time system. | | | A. Norr |
| | 3. The hard real time s | system tolerates | | B. Norr |
| | lateness and may resp | ond with decreased | | C. Out |
| | service quality. | | | D. Spe |
| | Which of the above sta | tements is/are correct? | 7. | The set |
| | A. 1 Only | B. 2 and 3 only | | second |
| | C. 3 only | D. 1, 2 and 3 | | A. prop |
| 2. | Which one of the follow | ving materials has least | | B. Inve |
| | piezoelectric charge se | nsitivity? | | frequer |
| | A. Quartz | | | C. equa |
| | B. Barium Titanate | | 0 | D. prop |
| | C. PZT | | 0. | rotation |
| | D. PVDF | | | |
| 3. | The ideal hydraulic rota | ary actuator provides | | C. 111 |
| | shaft torque, T, which i | is | 9. | The An |
| | A. equal to displaced v | olume measured. | | involve |
| | B. inversely proportion | al to the displaced | | 1. Qua |
| | volume measured. | | | 2. Sam |
| | C. proportional to the c | differential pressure. | | 3. Enco |
| | D. inversely proportion | al to the differential | | What is |
| | pressure. | | | A. 2-1- |
| 4. | An ammeter requires a | a change of 3 A in its | | C. 3-1- |
| | coil to produce a chang | ge in deflection of the | | Digi Hzation |
| | pointer by 12 mm. What | at is the static | | |
| | sensitivity? | | | |
| | A. 36 mm/A | B. 9 mm/A | | s |
| | C. 4 mm/A | D. 15 mm/A | | i |
| 5. | What is the force need | ed to apply to a piston | | |
| | of 2 cm radius in order | to result a force of | | |

6000 N at the working piston of radius 6 cm?

| ۹. | 1334 | N | в. | 333 | Ν |
|----|------|---|----|-----|---|
| | | | | | |

| 1050 N | D. 667 | Ν |
|--------|--------|---|

6. The following symbol in the ladder logic represents:

mally open contacts mally closed contacts put loads cial instruction ttling time for a unit step response of a l-order system is portional to the natural frequency. rsely proportional to the natural ncy. al to the damping ratio. portional to the damping ratio. al wrist mechanism with three nal joints would be indicated by B. TRL D. TRR alog-to-Digital conversion process es: intizing pling oding s the correct sequence? -3 B. 2-3-1 -2 D. 3-2-1 Analog Signal n process Sampling Quantizing Enwding

(sampling, Quantizing, encoding)

Digital signal

Statement (I): Gravity is the driving force behind flows through open channels.
Statement (II) : Gravity stands to reason that the ratio of inertial to gravitational forces will play a major role in open channel flow analysis.

> A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

11. Statement (I):

The viscosity of liquids decreases with the increase of temperature while the viscosity of gases increases with the increase of temperature.

Statement (II):

The viscous forces in a fluid are due to cohesive forces and molecular momentum transfer.

A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

12. Statement (I):

If two systems are in thermal equilibrium with a third system, then they are not in thermal equilibrium with each other.

Statement (II):

Zeroth law of thermodynamics is the basis for temperature.

A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

13. Statement (I):

A thermal energy reservoir is a system that always remains at constant temperature even though the heat is added to or removed from it.

Statement (II) :

A thermal reservoir that supplies heat energy is called sink and one that absorbs the heat energy is called source.

A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

 Statement (I): Wear is an issue whenever two components operate with relative motion between them or when liquids or solids impinge on a surface at high velocity.

> Statement (II): Wear is often cumulative and can eventually render the components incapable of delivering their expected performance.

> A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

> B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

> C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

15. Statement (1):

Increased productivity, reduced cost of labour and improved quality can be achieved by automation.

Statement (II):

Due to automation in process inventory, dependence on operator skills may be increased.

A. Both Statement (I) and Statement (II) are individually true and Statement (II) is the correct explanation of Statement (I).

B. Both Statement (I) and Statement (II) are individually true, but Statement (II) is not the correct explanation of Statement (I).

C. Statement (I) is true, but Statement (II) is false.

D. Statement (I) is false, but Statement (II) is true.

- **16.** Which one of the following lubricants is used in forward hot extrusion of steel?
 - A. Molten glass
 - B. Soap solution
 - C. Copper sulphate
 - D. Vegetable oil
- 17. Which one of the following statements is not the correct statement regarding operating characteristics (OC) curve for sampling plan?A. It shows ability to distinguish between good and bad lots.

B. No sampling plans can give completeprotection against acceptance of defectives.C. Larger the sample size, steeper is the slopeof the curve.

D. Acceptance number is zero for ideal sampling plan.

18. Which one of the following statements is not correct for forward or direct extrusion process?
A. High friction forces must be overcome.
B. High extrusion forces are required but mechanically simple and uncomplicated.
C. Low scrap or material waste only 5-6 % of billet weight.

D. Simple, but the material must slide along the chamber wall.

- **19.** Consider the following statements regarding defects in forgings:
 - Flakes are internal breaks or ruptures occurring in some grades of alloy steel.
 Die shift is caused by misalignment

between the top and bottom forging dies.

3. Fins and rags are small projections or loose metal driven into the surface of the forging.Which of the above statements are correct?

| Α. | 1 and 2 only | B. 1 and 3 only |
|----|--------------|-----------------|
| C. | 2 and 3 only | D. 1, 2 and 3 |

| 20. | Consider the following statements regarding | 23. | Parallel misalignment is present when |
|-----|--|-----|---|
| | desirable properties of cutting fluid: | | A. two shafts are parallel to each other but |
| | 1. It should get oxidized when left in air. | | are not in the same plane. |
| | 2. It should react with the materials of | | B. two shafts are parallel to each other and |
| | machine tool parts. | | are in the same plane. |
| | 3. It should wet the surface of cutting tool | | C. the shafts are not parallel to each other. |
| | and workpiece. | | D. the shafts are aligned with each other. |
| | Which of the above statements is/are correct? | 24. | The major limitation with displacement or |
| | A. 2 only | | proximity probes is |
| | B. 3 only | | A. Size B. Time |
| | C. 2 and 3 only | | C. Accuracy D. Cost |
| | D. 1, 2 and 3 | 25. | Which one of the following contains design |
| 21. | Consider the following statements regarding | | data on all products, e.g., their constituent |
| | limits and fits: | | components and parts? |
| | 1. Actual size is the standard size for the part | | A. Engineering data master file |
| | and is the same both for the hole and its | | B. Process data master file |
| | shaft. | | C. Inventory master file |
| | 2. Basic size is the dimension as measured on | | D. Sales master file |
| | the manufactured part | 26. | Which one of the following is the cutter with a |
| | 3 Deviation is the algebraic difference | | curved tooth outline of the same shape as the |
| | between a size and the corresponding basic | | profile of the workpiece? |
| | size | | A. Plain milling cutter |
| | Size. | | B. Face milling cutter |
| | which of the above statements is/are correct? | | C. End milling cutter |
| | | | D. Profile milling cutter |
| | B. 1 and 3 only | 27. | Which one of the following is a joining process |
| | C. 2 only | | that may employ acetylene, natural gas, |
| | D. 1, 2 and 3 | | butane in combination with oxygen to supply |
| 22. | Which of the following statements is not | | the heat required to melt the filler rod and |
| | correct about PERT? | | diffuse it into the surface of the base metal? |
| | A. Network is constructed based on the | | A. Furnace brazing B. Torch brazing |
| | events. | | C. Induction brazing D. Dip brazing |
| | b. It does not take uncertainties involved in | 28. | Consider the following statements regarding |
| | une estimation of times. | | modulation: |
| | c. Network deals with uncertainties and hence | | 1. The modulation is essential in |
| | D As there is no certainty of time, activity | | communication systems, where a weak signal |
| | D. AS there is no certainty of time, activity | | is transmitted by the use of a carrier signal. |

5

duration cannot be reduced.

B BYJU'S

byjusexamprep.com

2. When the frequency of the high frequency signal is varied in accordance with the intensity of the low-frequency weak signal, the modulation is said to be frequency modulation.

 The process of recovering original baseband signal from the modulated signal is called phase modulation.

Which of the above statements are correct?

- A. 1 and 3 only
- B. 1 and 2 only
- C. 2 and 3 only
- D. 1, 2 and 3
- 29. Consider the situation where a microprocessor gives an output of an 8 -bit word. This is fed through an 8-bit digital-to-analog converter to a control valve. The control valve requires 6.0. V to be fully open. If the fully open state is indicated by 1111111, then what is the output to the valve for a change of 1 bit?
 - A. 0.033 V
 - B. 0.053 V
 - C. 0.043 V
 - D. 0.023 V
- **30.** Which one of the following is not an application of Hall effect sensor?
 - A. Magnetic switch for electric transducer
 - B. Measurement of current
 - C. Measurement of acceleration
 - D. Measurement of power
- 31. The compound gear train shown in the figure below consists of compound gear B-C and D-E. All gears are mounted on parallel shafts. The motor shaft rotating at 800 rpm is connected to the gear A and the output shaft to the gear F. The number of teeth on gears A, B, C, D, E

and F are 24,56,30,80,32 and 72 respectively.

What is the speed of the gear $\ensuremath{\mathsf{F}}\xspace?$

- A. 57.14 rpm
- B. 32.51 rpm
- C. 74.63 rpm
- D. 69.72 rpm
- 32. A quick-return mechanism is to be designed, where the outward stroke must consume 1.2 s and the return stroke 0.8 s. If the cycle time is 2.0 s/rev, what is the speed at which the mechanism should be driven?

| A. 10 rev/s | B. 30 rev/s |
|---------------|---------------|
| C. 10 rev/min | D. 30 rev/min |

- 33. The following data relate to a single-cylinder reciprocating engine: mass of reciprocating parts = 40 kg, mass of revolving parts = 30 kg at crank radius, speed = 150 rpm, stroke = 350 mm. If 60 % of the reciprocating parts and all the revolving parts are to be balanced, what is the balance mass required at a radius of 320 mm?
 - A. 15.27 kgB. 21.43 kgC. 24.96 kgD. 29.53 kg
- 34. A leaf spring consists of seven steel plates, each 60 mm wide and 6 mm thick, What is the length of the spring if it is to carry a central load of 3 kN, without the stress exceeding 150 MPa?
 - A. 547 mm
 - B. 498 mm
 - C. 494 mm
 - D. 504 mm

- **35.** According to maximum shear stress theory, with comparison to yield strength in tension, the yield strength in shear is
 - A. half the yield strength in tension.
 - B. same as that of yield strength in tension.
 - C. double the yield strength in tension.

D. 1.33 times that of the yield strength in tension.

- **36.** In curved beams, normally the nature of stress distribution is
 - A. linear
 - B. circular
 - C. parabolic
 - D. hyperbolic
- **37.** Consider the following statements regarding crack:

1. Crack is more likely to occur in the regions of discontinuity such as oil holes.

- 2. Crack is more likely to occur in the regions of irregularities in machining operations such as stamp mark.
- 3. Crack is more likely to occur in the internal cracks due to defects in materials like blow holes.

Which of the above statements are correct?

A. 1 and 2 only B. 2 and 3 only

C. 1 and 3 only D. 1, 2 and 3

- 38. The yield strength of bolt material is 300 MPa and factor of safety is 2.5. What is the maximum principal stress using maximum principal stress theory?
 - A. 750 MPa B. 120 MPa
 - C. 27.38 MPa D. 10.95 MPa
- **39.** Which one of the following theories gives satisfactory results for brittle materials?
 - A. Maximum principal stress theory
 - B. Maximum shear stress theory
 - C. Distortion energy theory
 - D. Shear stress energy theory

- 40. A cast steel bar having an ultimate strength of 120 MPa is subjected to a reversed, repeated, bending load. The bar will be machined to a rectangular cross-section, 150 mm wide × 200 mm high. What is the equivalent diameter?
 - A. 14 mm B. 30 mm

| C. 140 mm | D. 300 mm |
|-----------|-----------|
|-----------|-----------|

41. Consider the following statements regarding typical analysis of bolt failure:

1. 15 % failure of bolt occur at the fillet under the head.

2. 50 % failure of bolt occur at the end of threads on the shank.

3. 80 % failure of bolt occur in the threads that are in contact with the nut.

Which of the above statements is/are correct?

- A. 1 only
- B. 3 only
- C. 2 and 3 only
- D. 1, 2 and 3
- **42.** Which of the following are the functions of lubrication in a bearing unit?

1. To protect the bearing components from corrosion.

2. To absorb heat from the bearing unit.

3. To carry heat away from the bearing unit.

Select the correct answer using the code given below:

| าd 3 only |
|-----------|
| r |

C. 2 and 3 only D. 1, 2 and 3

43. Consider the following statements regarding clutches:

1 Dry clutch has higher coefficient of friction compared to wet clutch.

2. The torque capacity of wet clutch is high compared to dry clutch.

- 3. The engagement in a dry clutch is
- smoother than in case of wet clutch.

Which of the above statements is/are correct?

- A. 1 only
- B. 1 and 3 only
- C. 2 only
- D. 1, 2 and 3
- **44.** Which of the following factors can cause misalignment of the teeth on the pinion relative to those on the gear?
 - 1. Inaccurate gear teeth

2. Misalignment of the axes of shafts carrying gears

3. Thermal distortions during operation Select the correct answer using the code given below:

| A. | 1 and | 2 only | В. | 1 | and | 3 | only |
|----|-------|--------|----|---|-----|---|------|
| | | = •, | | _ | | - | •••• |

C. 2 and 3 only D. 1,2 and 3

45. Consider the following statements regarding welded and riveted joints:

1. Welded assemblies are tight and leak proof as compared with riveted assemblies.

2. Single-welded V-joint is less reliable than square butt joint.

- 3. Welding results in a thermal distortion of the parts, thereby inducing residual stresses.Which of the above statements is/are correct?
- A. 1 only
 B. 1 and 3 only

 C. 2 only
 D. 1, 2 and 3
- 46. Iron at 20°C is BCC with atoms of atomic radius 0.124 nm. What is the lattice constant 'a' for the cube edge of the iron unit cell?
 A. 0.2864 nm
 B. 0.1496 nm
 - C. 0.2173 nm D. 0.1756 nm
- 47. Copper has the FCC crystal structure and a unit cell with a lattice constant of 0.361 nm. What is the interplanar spacing d₂₂₀?
 A. 0.085 nm
 B. 0.174 nm
 - C. 0.206 nm D. 0.128 nm

48. Which one of the following is not a step of lever rule of determination of phase amounts ?A. A tie line is constructed across the two-phase region at the temperature of the alloy.B. The overall alloy composition is located on the tie line.

C. Perpendiculars are dropped from these intersections to the horizontal composition axis, from which the composition of each of the respective phases is read.

D. The fraction of one-phase is computed by taking the length of tie line from the overall alloy composition to the phase boundary for the other phase and dividing by the total tie line length.

49. Consider the following statements regarding polymeric materials:

1. A plastic material that requires heat to make it formable (plastic) and upon cooling, retains its shape is known as thermosetting plastic.

2. The chemical reaction in which high molecular mass molecules are formed from two or more monomers is called chain polymerization.

3. A polymer chain consisting of two or more types of monomeric units is called copolymer.Which of the above statements is/are correct?

| A. 1 and 2 only | B. 2 and 3 only |
|-----------------|-----------------|
| | |

C. 2 only D. 3 only

- **50.** As per mechanical properties, which one of the following microconstituents is soft and ductile?
 - A. Bainite
 - B. Martensite
 - C. Spheroidite
 - D. Tempered martensite

| 51. | The simultaneous com | paction and shaping of | | 4. In a spherical cam | , the follower oscillates |
|------------|---------------------------|--------------------------|-----|--|---------------------------|
| | a ceramic powder (and | l binder) by pressure | | about an axis perpe | ndicular to the axis of |
| | applied uniformly in all | directions is known as | | rotation of the cam. | |
| | A. Glaze pressing | B. Porcelain pressing | | Which of the above sta | atements are correct? |
| | C. Slip pressing | D. Isostatic pressing | | A. 1 and 4 only | |
| 52. | An electric motor driv | es a punching press. A | | B. 2 and 4 only | |
| | flywheel fitted to the p | ress has a radius of | | C. 2 and 3 only | |
| | gyration of 0.5 m and | l runs at 250 rpm. The | | D. 1, 2, 3 and 4 | |
| | press is capable of punc | ching 800 holes per hour | 56. | Under which of the foll | lowing conditions is |
| | with each punching | operation taking 1.5 | | Coriolis component en | countered in the |
| | seconds and requiring | 12,000 N-m of work. | | relative acceleration of | f two points? |
| | The energy delivered | by the motor during | | 1. The two points are | coincident, but on |
| | punching operation is | | | different links. | |
| | A. 2000 N-m | B. 3000 N-m | | 2. The point on one lin | k traces a path on the |
| | C. 4000 N-m | D. 5000 N-m | | other link. | |
| 53. | A linkage has 11 links | and 4 loops. What is the | | 3. The link that contain | ns the path rotates. |
| | degree of freedom if it | has only single turning | | Select the correct answ | wer using the code |
| | pairs ? | | | given below: | |
| | A. U | B. 1 | | A. 1 and 2 only | B. 1 and 3 only |
| F <i>1</i> | U. Z | U. 3 | | C. 2 and 3 only | D. 1,2 and 3 |
| 54. | of first inversion of sin | ale-slider-crank chain? | 57. | A mass 'm' attached to | o a light spring |
| | A Hand-numn | | | oscillates with a period | l of 2 seconds. If the |
| | B Reciprocating engine | ٩ | | mass is increased by 2 | kg, the period |
| | C. Elliptical trammel | | | increases by 1 second. | . What is the value of |
| | D. Whitworth quick-ret | urn mechanism | | the mass? | |
| 55. | Consider the following | g statements regarding | | A. 0.9 kg | |
| | cams: | | | B. 1.6 kg | |
| | 1. A cam in which the | follower moves radially | | C. 2.1 kg | |
| | from the center of rota | tion of the cam is known | | D. 2.7 kg | |
| | as a disc cam. | | 58. | What is the critical speed of the shaft if its | |
| | 2. A globoidal cam is | a double-disc cam, the | | natural frequency of | transverse vibration is |
| | two discs being keye | d together and are in | | 2.85 HZ? | |
| | constant touch with | the two rollers of a | | | |
| | follower. | | | с. 200 грт с. 570 грт | |
| | 3. A conjugate cam | can have two types of | | C_{1} 570 (pm) | |
| | surfaces, convex or co | ncave. | | D. 142.5 rpm | |

- **59.** Consider the following statements regarding gears: 1. The ratio of number of teeth on the gear to that on the pinion is known as gear ratio. 2. The circle passing through the tips of teeth is called dedendum circle. 3. The circle passing through the roots of teeth is called addendum circle. 4. Backlash is the difference between the space width and the tooth thickness along the pitch circle. Which of the above statements are correct? A. 1,2 and 3 only B. 1 and 4 only C. 2 and 3 only D. 1,2,3 and 4 **60.** The number of teeth of a spur gear is 30 and it rotates at 200 rpm. What is the pitch line velocity if it has a module of 2 mm? A. 341.7 mm/s B. 497.2 mm/s C. 628.3 mm/s D. 758.5 mm/s **61.** A man whose weight is 650 N, standing on the ground, raises a load of 3000 N by means of single string system of pulleys. There are six light pulleys in each block. The thrust of the man on the ground is B. 135 N A. 120 N C. 150 N D. 175 N **62.** A particle starts with an initial velocity of 200 cm/s and moves with a uniform retardation of 10 cm/s. If it describes 1500 cm in time, what is/are the possible value(s) of t? A. 10 sec only B. 10 sec and 30 sec
 - C. 30 sec only D. 5 sec and 10 sec
- **63.** Consider the following statements for system of forces:

1. Two or more forces that act at the same point are called coplanar forces.

- Two or more forces whose directed arrows lie in same plane are called concurrent forces.
 Varignon's theorem states that the moment of several concurrent coplanar forces about any point O in their plane equals the moment of their resultant about the point O.
 Lami's theorem states that if a body is in equilibrium under the action of three forces, each force is proportional to the sine of angle between the other forces. Which of the above statements are correct?
- A. 1,2 and 4 only B. 1 and 4 only
- C. 3 and 4 only D. 1,2 and 3 only
- **64.** Consider the following statements related to stress and strain :

1. Shear stress is always tangential to the area over which it acts.

2. Shear stresses on the transverse pair of faces are known as complimentary shear stresses.

3. Shear strain is defined as the change in the right angle of the element measured in radians.

4. Modulus of rigidity is the ratio of shear strain to shear stress.

Which of the above statements are correct?

- A. 1, 3 and 4 only
- B. 2 and 4 only
- C. 3 and 4 only
- D. 1, 2 and 3
- **65.** Consider the following statements for stress and strain analysis :

1. The stress components on any inclined plane can easily be found with the help of a geometrical construction known as Mohr's stress circle.

2. The ratio of longitudinal strain to lateral strain is known as Poisson's ratio.

3. When a body is acted upon by three mutually perpendicular forces, there is change in the volume of the body which is referred to as dilation of the material.

4. The ratio of original volume to increase in volume is known as volumetric strain.

Which of the above statements are correct?

A. 1 and 3 only B. 2 and 4 only

C. 3 and 4 only D. 1,2,3 and 4

66. The stresses on two perpendicular planes through a point in a body are 160 MPa and 100 MPa, both compressive, along with a shear stress of 80 MPa. What is the normal stress on a plane inclined at 30° to the plane of 160 MPa stress ?

| A. –42.4 MPa B. –7 | 5.7 | МРа |
|--------------------|-----|-----|
|--------------------|-----|-----|

- C. -59.1 MPa D. -86.3 MPa
- **67.** Consider the following statements regarding types of supports and beams:

1. When both supports of beams are roller supports, the beam is known as simply supported beam.

2. A beam with one end fixed and the other end free is known as fixed beam.

3. A beam with both ends fixed is known as cantilever beam.

4. A beam with one end fixed and the other simply supported is known as propped cantilever.

Which of the above statements is/are correct?A. 1 onlyB. 1 and 4 only

C. 1,3 and 4 only D. 2,3 and 4 only

68. Consider the following statements regarding stress in beam:

 If a member is subjected to equal and opposite couples acting in the same longitudinal planes, the member is said to be in pure bending.

2. The internal stresses developed in the beam are known as flexural stresses.

 There is an intermediate surface known as neutral surface, at which the stress is zero.
 An axis obtained by intersection of the neutral surface and a cross-section is known as neutral axis.

Which of the above statements are correct?A. 2 and 3 onlyB. 1 and 4 onlyC. 3 and 4 onlyD. 1,2,3 and 4

69. Consider the following statements for the symmetric beam under pure bending :

1. In the elastic range, the normal stress varies linearly with the distance from the neutral surface.

2. As long as the stresses remain in the elastic range, the neutral axis passes through the centroid of the section.

3. If stresses are in the plastic range, the neutral axis passes through the centroid of the section.

Which of the above statements is/are correct?A. 1 onlyB. 2 only

- C. 1 and 2 only D. 2 and 3 only
- **70.** The volume of FCC unit cell in terms of the atomic radius R is

| A. $V_{c} = 16R^{3}\sqrt{3}$ | B. $V_{c} = 8R^{3}\sqrt{2}$ |
|------------------------------|-----------------------------|
| C. $V_{c} = 16R^{3}\sqrt{2}$ | D. $V_c = 8R^3\sqrt{3}$ |

- 71. Which one of the following alloying ingredients increases the hardenability and forms carbides for wear resistance?
 - A. Chromium B. Molybdenum
 - C. Nickel D. Manganese
- 72. Which one of the following related to the most stable arrangement of atoms in a crystal is not correct?
 - A. Preserves electrical neutrality
 - B. Maximizes strong ion-ion repulsion
 - C. Satisfies discreteness of all covalent bonds
 - D. Packs the atoms as closely as possible

73. The dielectric constant of rubber varies

| А. | 0.5 anu | 1.0 | р. | 1.0 | anu | 1.5 |
|----|---------|-----|----|-----|-----|-----|
| C. | 1.5 and | 2.0 | D. | 2.5 | and | 5.0 |

74. Consider the following statements for ductile fracture:

1. The material undergoes substantial plastic deformation with high energy absorption before fracture.

2. Presence of cracks on the surface of material initiates this type of failure.

3. Fracture occurs due to necking. Which of the above statements is/are correct?

A. 1 only B. 1 and 2 only

C. 2 and 3 only D. 1 and 3 only

75. The TTT diagram shows the times required for isothermal transition from

A. austenite to pearlite. B. austenite to ferrite.C. ferrite to pearlite.D. martensite to pearlite.

76. Water is flowing through a pipe of diameter 200 mm with a velocity of 3 m/s. What is the head loss due to friction for a length of 5 m if the coefficient of friction is given by f = 0.02 +

 $\frac{0.09}{\text{Re}^{0.3}}$, where Re Reynolds number? (Take the

kinematic viscosity of water as 0.01 stokes, g = 9.81 m/s^2 and $(6 \times 10^5)^{0.3} = 54.13$).

- A. 0.993 m of water
 B. 0.783 m of water

 C. 0.685 of water
 D. 0.552 m of water
- **77.** Water is flowing through a horizontal pipe of diameter 200 mm at a velocity of 3 m/s. A circular solid plate of diameter 150 mm is placed in the pipe to obstruct the flow. What is the loss of head due to obstruction in the pipe if $C_c = 0.62?$ (Take $q = 9.81 \text{ m/s}^2$)

| | · · | 5 | , | |
|---------|-----|----|-------|---|
| A. 3.31 | 1 m | В. | 4.211 | m |

C. 5.211 m D. 6.211 m

78. Three pipes of length 800 m, 500 m and 400 m and of diameters 500 mm, 400 mm and 300 mm respectively are connected in series. These pipes are to be replaced by a single pipe of length 1700 m. What is the diameter of the single pipe?

A. (0.007118)^{0.2} m B. (0.003609)^{0.3} m C. (0.003609)^{0.2} m D. (0.007118)^{0.3} m

79. The head of water at the inlet of a pipe 2000 m long and 500 mm diameter is 60 m. A nozzle of diameter 100 mm at its outlet is fitted to the pipe. What is the velocity of water at the outlet of the nozzle if f = 0.01 for the pipe? (Take $g = 9.81 \text{ m/s}^2$) A. 30.61 m/s B. 34.81 m/s

- 80. Water is flowing with a velocity of 1.5 m/s in a pipe of length 2500 m and of diameter 500 mm. At the end of the pipe, a valve is provided. What is the rise in pressure if the valve is closed in 25 seconds ? (Take the value of C as 1460 m/s)
 - A. 12 N/cm²
 - B. 15 N/cm²
 - C. 16 N/cm²
 - D. 18 N/cm²
- 81. If a submerged body is in unstable equilibrium, then

A. the centre of buoyancy is below the centre of gravity.

B. the centre of buoyancy is above the centre of gravity.

C. meta-centre is below the centre of buoyancy.

D. meta-centre is above the centre of buoyancy.

- 82. How much of concrete with $\gamma = 25 \text{ kN/m}^3$ must be attached to a beam having a volume of 0.1 m³ and specific gravity 0.6 to cause both to sink in water ? (Take g = 9.81 m/s²) A. 0.825 kN B. 0.745 kN
 - C. 0.525 kN D. 0.645 kN
- **83.** A liquid has a specific gravity of 1.9 and a kinematic viscosity of 6 stokes. What is the dynamic viscosity?
 - A. 1.14 Ns/m² B. 2.44 Ns/m²
 - C. 3.40 Ns/m² D. 11.40 Ns/m²
- 84. Oil of specific gravity 0.8 flows through a 0.2 m diameter pipe under a pressure of 100 kN/m². If the datum is 5 m below the centerline of the pipe and the total energy with respect to the datum is 35 Nm/N, the discharge is (Take $q = 9.81 \text{ m/s}^2$ }
 - A. 0.58 m³/secB. 0.47 m³/secC. 0.31 m³/secD. 0.22 m³/sec
- **85.** Bernoulli's equation is obtained by
 - A. integrating the Euler's equation of motion.

B. differentiating the Euler's equation of motion.

C. differentiating the Navier-Stokes equations.

- D. integrating energy equation.
- 86. Which one of the following is not the methodology of control separation of flow from boundary in the application of airfoils?
 - A. Streamlining of blunt body shapes
 - B. Fluid ejection from the boundary layer
 - C. Suction of fluid from the boundary layer
 - D. Creating a motion of the boundary wall
- 87. What is the value of mass of the air in a room of size 4 m \times 5 m \times 6 m at 100 kPa and 25°C (Take R = 0.287 kPa. m³. Kg⁻¹.K⁻¹)?
 - A. 150 kg B. 180 kg
 - C. 140 kg D. 130 kg

- 88. A body of weight 100 N is placed on a rough horizontal plane. What is the coefficient of friction if a horizontal force of 60 N just causes the body to slide over the horizontal plane?A. 0.4 B. 0.5
 - C. 0.6 D. 0.9
- **89.** A body is moving with a velocity of 2 m/s. After 4 seconds, the velocity of the body becomes 5 m/s. The acceleration of the body is A. 0.55 m/s^2 B. 0.65 m/s^2 C. 0.75 m/s^2 D. 0.45 m/s^2
- **90.** The principal stresses at a point in an elastic material are 60 N/mm² tensile, 20 N/mm² tensile and 50 N/mm² compressive. What is the volumetric strain by considering Young's Modulus as 100×10^3 N/mm² and $\mu = 0.3$? A. 1.20×10^{-4} B. 1.06×10^{-5} C. 1.30×10^{-3} D. 1.12×10^{-2}
- 91. In an absorption type refrigeration system, heating in generator, refrigeration in evaporator and cooling by cooling water in condenser, take place at 95°C, -5°C and 30°C respectively. What is the maximum COP of the system?
 - A. 1.17B. 1.35C. 1.52D. 1.78
- **92.** Consider the following statements for sensible heat factor:

1. Sensible heat factor will be negative if sensible heat and latent heat are both negative.

2. Sensible heat factor will be negative if sensible heat is negative and latent heat is positive.

3. Sensible heat factor will be negative if sensible heat is positive and latent heat is negative.

4. Sensible heat factor will be negative if sensible heat and latent heat are both positive.Which of the above statements are correct?

- A. 2 and 3 only
- B. 1 and 2 only
- C. 1 and 3 only
- D. 2 and 4 only
- **93.** If the air is initially at dry bulb temperature 35°C and wet bulb temperature 26.1 °C as it enters an air washer which has a humidifying efficiency of 85%, then what is the final dry bulb temperature of air washed with recirculated spray water?

A. 26.81 °C B. 27.43 °C

C. 32.83 °C D. 30.49 °C

94. Consider the following statements for Nucleate boiling:

1. For water, the critical heat flux does not exceed 1 $\ensuremath{\mathsf{MW/m^2}}\xspace$.

2. Nucleate boiling is the most desirable boiling regime in practice because of high heat transfer rates.

3. Heat flux increases at a higher rate with increase in temperature.

Which of the above statements is/are correct?

A. 1 only B. 2 only

C. 1 and 3 only D. 2 and 3 only

95. In drop-wise condensation, the heat transfer rate is

A. 5 times less than that in film-wise condensation.

B. 15 times less than that in film-wise condensation.

C. 25 times more than that in film-wise condensation.

D. 10 times more than that in film-wise condensation.

96. 1 kg of water falls from an altitude of 1000 m above ground level. What is the change in the temperature of water at the foot of the fall, if there are no losses during the fall ? (Take specific heat of water as 1 kcal.kg⁻¹.K⁻¹ and g = 9.81 m/s^2)

| A. 3.35°C | B. 2.35°C |
|-----------|-----------|
| C. 3.32°C | D. 4.12°C |

- **97.** A stationary mass of gas is compressed without friction from an initial state of 0.3 m³ and 0.105 MPa to a final state of 0.15 m³ and 0.105 MPa, the pressure remaining constant during the process. There is a transfer of 40 kJ of heat from the gas during the process. How much does the internal energy of the gas change ?
 - A. -24.25 kJ
 - B. –19.62 kJ
 - C. -15.91 kJ
 - D. –12.72 kJ
- 98. The state of a simple compressible pure
 - A. one independent property.
 - B. two independent properties.
 - C. three independent properties.
 - D. four independent properties.
- 99. In a thermoelectric thermometer for t°C temperature, the emf is given as :

 $E = 0.003 \text{ t} - 5 \times 10^{-7} \text{ t}^2 + 0.5 \times 10^{-3}$ volts Thermometer is having reference junction at ice point and is calibrated at ice point and steam point. What is the temperature shown by the thermometer for a substance at 30°C?

| A. 33.23°C | B. 30.35°C |
|------------|------------|
| C. 41.23°C | D. 46.28°C |

| 100. | Consider the following | statements for | | 2. If $S_{gen} > 0$, the | en the process is an | | | |
|------|--------------------------------|------------------------------------|------|--|-----------------------------------|--|--|--|
| | comparison of heat and work: | | | irreversible process. | | | | |
| | 1. Both heat and work | are transient | | 3. If $S_{gen} < 0$, then the | process is impossible. | | | |
| | phenomena. | | | Select the correct answ | ver using the code given | | | |
| | 2. Both heat and work | are boundary | | below: | | | | |
| | phenomena. | | | A. 1 and 2 only B | . 2 and 3 only | | | |
| | 3. Both heat and work | are path functions and | | C. 1 and 3 only D | . 1, 2 and 3 | | | |
| | inexact differentials. | | 105. | What is the critical r | adius of insulation for | | | |
| | Which of the above sta | tements are correct? | | asbestos (thermal con | ductivity = 0.17 W.m ⁻ | | | |
| | A. 1 and 2 only | B. 1,2 and 3 | | ¹ .°C ⁻¹) surrounding a c | ircular pipe and exposed | | | |
| | C. 2 and 3 only | D. 1 and 3 only | | to room air at 20° | 'C with heat transfer | | | |
| 101. | A tank containing a flu | id is stirred by a paddle | | coefficient 3 W.m ⁻² .°C ⁻ | ·1 ? | | | |
| | wheel. The work input | to the paddle wheel is | | A. 7.21 cm | B. 6.37 cm | | | |
| | 5090 kJ. The heat tra | insfer from the tank is | | C. 5.67 cm | D. 6.93 cm | | | |
| | 1500 kJ. What is the ch | nange in internal energy | 106. | A turbine develops 800 | JU KW when running at | | | |
| | of this control mass? | (Consider the tank and | | the head is reduced to | 18 m what is the speed | | | |
| | the fluid inside a contro | ol surface) | | developed by the turbi | ne? | | | |
| | A. – 3590 kJ | B. + 3590 kJ | | A. 67.46 rpm | B. 95.24 rpm | | | |
| | C. + 4590 kJ | D. – 4590 kJ | | C. 54.67 rpm | D. 774.6 rpm | | | |
| 102. | During the charging of | a storage battery, the | 107. | The steam turbine ca | n be governed by the | | | |
| | current is 20 A and the | e voltage is 12.8 V. The | | following methods exce | ept | | | |

| | Which of the following | conditions are correct? | | C. Rankine Cycle | | | | |
| | 1. If $S_{gen} = 0$, then the | e process is a reversible | | D. Brayton Cycle | | | | |
| | process. | | | | | | | |

| 110. In hydraulic turbines, if the energy available at | A. 67.82% B. 70.24% |
|---|---|
| inlet is only kinetic energy, then that type of | C. 77.32% D. 83.33% |
| turbine is | 117. Freon-12 is used in a simple saturation cycle, |
| A. Reaction turbine B. Impulse turbine | with suction saturation temperature of $-10^{\circ}C$ |
| C. Francis turbine D. Kaplan turbine | and condensing saturation temperature of |
| 111. A centrifugal pump has an impeller of 30 cm | 30°C. If the clearance volume is 6% of the |
| outer diameter. The vane tips are radial at the | stroke volume, what is the volumetric |
| outlet. For a rotative speed of 1450 rpm, what | efficiency? (Consider specific volume at suction |
| is the manometric head developed ? (Assume | and discharge to be 0.07815 m ³ /kg and 0.025 |
| a manometric efficiency of 82% and take g = | m ³ /kg respectively) |
| 9.81 m/s ²) | A. 87.24% B. 71.31% |
| A. 37.24 m B. 43.38 m | C. 64.85% D. 55.43% |
| C. 29.46 m D. 32.88 m | 118. Relative ozone destruction efficiency of R-12 is |
| 112. Lenoir cycle is used for | A. 0.29 B. 0.86 |
| A. Gas turbines B. Pulse jet engines | C. 0.05 D. 0.57 |
| C. S.I. engines D. C.I. engines | 119. An air cooled condenser has 6 m ² of surface |
| 113. A diesel engine has a compression ratio of 20 | with a removal of 50 kJ.hr ⁻¹ .m ⁻² .°C ⁻¹ . What is |
| and cut-off takes place at 5% of the stroke. | the refrigerant temperature to dissipate 5235 |
| What is the cut-off ratio? | kJ/hr, if the room temperature is 25°C ? |
| A. 1.21 B. 1.47 | A. 24.31°C B. 35.82°C |
| C. 1.73 D. 1.95 | $C. 42.45^{\circ}C$ D. 56.94°C |
| 114. The cubic capacity of a four-stroke over-square | 120. The actual and theoretical COP of rolling piston |
| spark-ignition engine is 275cc. The clearance | is the rolative COP 2 |
| volume is 25 cc. What is the compression ratio | |
| of the engine? | C. 1.3 D. 0.76 |
| A. 8 B. 10 | 121. A fuel consists of 92% carbon, 7% hydrogen |
| C. 12 D. 14 | and remaining residual matter by mass. |
| 115. The mechanical efficiency of a single-cylinder | Working from first principles, the higher |
| four-stroke engine is 60%. The frictional power | calorific value of the fuel is |
| is estimated to be 30 kW. What is the indicated | A. 40176 kJ/kg B. 41176 kJ/kg |
| power? | C. 40876 kJ/kg D. 41678 kJ/kg |
| A. 120 kW B. 75 kW | 122. In order to burn a fuel completely, Which of the |
| 116 A four stroke petrol engine at full lead delivers | following basic conditions must be fulfilled? |
| 100 kW. It requires 10 kW to rotate it Without | 1. Supply enough air for complete combustion |
| load at same sneed. What is the mechanical | 2 Secure low turbulence for thorough mixing |
| efficiency at half load? | of fuel and air. |
| enciency at nall load! | |

3. Maintain a furnace temperature high enough to ignite the incoming fuel air mixture.

4. Provide a furnace volume large enough to allow time for combustion to be completed.

Select the correct answer using the code given below:

- A. 1, 2 and 3 only B. 1, 2 and 4 only
- C. 1, 3 and 4 only D. 2, 3 and 4 only

123. The efficiency of any cycle increases with

A. the decrease of maximum pressure and the constant of exhaust pressure.

B. the decrease of maximum pressure and the decrease of exhaust pressure.

C. the increase of maximum pressure and the decrease of exhaust pressure.

D. the increase of maximum pressure and the constant of exhaust pressure.

124. In a power plant, the efficiencies of the electric generator, turbine (mechanical), boiler, cycle and the overall plant are 0.97, 0.95, 0.92, 0.42 and 0.33, respectively. What is the efficiency of auxiliaries?

| A. 98.14% | B. 92.68% |
|-----------|-----------|
| C. 83.41% | D. 75.14% |

125. Consider the following statements for analysis of steam cycles :

1. A steam power plant continuously converts the energy stored in fossil fuels or fissile fuels into shaft work.

2. Steam power plants work on Brayton cycle.

3. In supercritical steam cycle, steam is generated in a 'once-through' boiler at a pressure above the critical point of 27.5 bar.

4. Deaerator is used for the purpose of deaerating the feedwater.

Which of the above statements are correct?

| A. 2 and 3 only | B. 1 and 3 only |
|-----------------|-----------------|
| C. 1 and 4 only | D. 2 and 4 only |

126. Consider the following statements for solid fuels :

1. Peat is the first stage in the formation of coal from wood.

2. The average calorific value of bituminous coal is 1524 kJ/kg.

3. Anthracite is very hard coal and has a shining black lustre.

4. Wood charcoal is obtained by destructive distillation of wood.

Which of the above statements are correct ?

A. 1, 2 and 3 only B. 1, 3 and 4 only

C. 2 and 3 only D. 1, 2 and 4 only

127. Consider the following statements for fluidized bed boilers:

1. Fluidized bed boilers produce steam from fossil and waste fuels by using a technique called fluidized bed combustion.

2. Cyclone separators are gas cleaning devices that utilize the centrifugal force created by a spinning gas stream to separate particles from a gas.

3. In a pressurized fluidized bed boiler, the combustion process takes place in a pressurized environment resulting in a compact furnace and improved combustion efficiency.

Which of the above statements are correct?

| A. 1 and 2 only | B. 2 and 3 only |
|-----------------|-----------------|
| | |

| C. 1 and 3 only | D. | 1, | 2 | and | 3 | 3 |
|-----------------|----|----|---|-----|---|---|
|-----------------|----|----|---|-----|---|---|

128. Consider the following statements for steam turbines:

1. The ratio of actual enthalpy drop to isentropic enthalpy drop is known as mechanical efficiency.

2. The ratio of enthalpy drop in moving blades to enthalpy drop in the stage is known as degree of reaction.

3. Rateau turbine is the example of reaction turbine.

4. Curtis turbine is the example of impulse turbine.

Which of the above statements are correct?

A. 2 and 4 only

- B. 1 and 3 only
- C. 2 and 3 only
- D. 1, 2, 3 and 4
- **129.** Consider the following statements for cooling towers:

1. Cooling tower is an artificial device used to cool the hot cooling water coming out of condenser more effectively.

 The amount of water usually lost with induced draft cooling tower ranges from 5% to 6% by evaporation.

 The amount of water usually lost with induced draft cooling tower ranges from 7% to 8% by drift losses.

4. The rate of evaporation of water and its cooling float on the remaining water depends upon the relative humidity of air passing through the tower.

Which of the above statements are correct ?

A. 1 and 4 only B. 1 and 3 only

C. 2 and 3 only D. 1, 2, 3 and 4

130. A single-acting reciprocating pump, running at 50 rpm delivers 0.0073 m³/s of water. The diameter of the piston is 200 mm and stroke length is 300 mm. What is the percentage slip of the pump?

| A. 5.29% | B. 6.29% |
|----------|----------|
| C. 7.29% | D. 8.29% |

131. A pump discharges a liquid into a tank at the rate of 0.032 m³/s. The tank, 1.5 m in diameter and 4.20 m in height, can hold 3500 kg of liquid. The density of the liquid and mass flow rate of the liquid handled by the pump are respectively,

A. 471.57 kg/m³ and 16 kg/s

- B. 471.57 kg/m³ and 15 kg/s
- C. 481.57 kg/m³ and 16 kg/s
- D. 481.57 kg/m³ and 15 kg/s
- **132.** In Francis turbine, as the water discharge is radial at the outlet, the velocity whirl at the outlet becomes
 - A. 1 B. 0
 - C.∞ D. 0.5
- **133.** A pump impeller is 375 mm in diameter and it discharges water with velocity components of 2 m/s and 12 m/s in the radial and tangential directions respectively. The impeller is surrounded by a concentrical cylindrical chamber with parallel sides, the outer diameter being 450 mm. If the flow in the chamber is a free spiral vortex, what are the tangential velocity and radial velocity at the outlet of the chamber respectively?
 - A. 12 m/s and 1.67 m/s
 - B. 10 m/s and 1.67 m/s
 - C. 12 m/s and 1.76 m/s
 - D. 10 m/s and 1.76 m/s
- **134.** Which one of the following types of impellers is used to handle highly solid-laden liquids like concrete and slurry?
 - A. Fully Open Impeller
 - B. Semi-Enclosed Impeller
 - C. Fully-Enclosed Impeller
 - D. Quarter Open Impeller

| | C. 5 | D. 7 | | C. Damper wall | D. Ventilation wall | |
| 139. | What is the solidity of | of American multiblade | 148. | All power plants use superheated steam due to | | |
| | wind turbine rotor ? | | | which of the following advantages? | | |
| | A. 0.4 | B. 0.7 | | 1. Superheating is mo | ostly done from waste | |
| | C. 0.9 | D. 1 | | heat of boiler without a | dditional cost of fuel. | |
| 140. | The energy density of E | Bio-ethanol is | | 2. The plant efficiency increases due to higher | | |
| | A. 8.3 MJ/kg | B. 14.6 MJ/kg | | temperature of steam. | | |
| | C. 26.9 MJ/kg | D. 34.7 MJ/kg | | 3. There is less cor | rosion and erosion of | |
| 141. | The percentage of hydr | ogen in producer gas is | | equipment due to absence of moisture in the | | |
| | A. 34% | B. 27% | | steam. | | |
| | C. 18% | D. 8% | | Select the correct answ | ver using the code given | |
| 142. | In single basin, double | effect scheme, power is | | below: | | |
| | generated | | | A. 1 and 2 only | | |
| | A. during filling. | | | B. 2 and 3 only | | |
| | B. during emptying. | | | C. 1 and 3 only | | |
| | C. on ebb only. | | | , D. 1, 2 and 3 | | |
| | D. on both flood and et | b. | | , - | | |
| | | I | | | | |

| 149 | • What are the effects of regenerative feedwater | | | 150. Which of the following are the advantages of | | |
|-----|--|--------------------|--|---|--------------------------|--|
| | heating for the same turbine output?1. It significantly increases the cycle efficiency and reduces the heat rate.2. It increases the steam flow rate.3. It increases the steam flow to the condenser. | | | pulverized coal firing ? | | |
| | | | | 1. Higher boiler efficiency. | | |
| | | | | 2. Fast response for | r no load changes. | |
| | | | | 3. Ability to use low | v preheated air reducing | |
| | | | | internal losses. | | |
| | | | | 4. Ability to release large amounts of heat | | |
| | 4 If there is no change of boiler output, the turbine output drops. Select the correct answer using the code given | | | enabling it to generate about 2000 t/h of steam in one boiler. Select the correct answer using the code given | | |
| | | | | | | |
| | | | | | | |
| | below : | | | below : | | |
| | A. 1, 2 and 3 only | B. 1, 2 and 4 only | | A. 1 and 2 only | B. 1 and 3 only | |
| | C. 1, 3 and 4 only | D. 2, 3 and 4 only | | C. 1 and 4 only | D. 2, 3 and 4 only | |
| | | I | | | | |

Benefits of Online Classroom Program

- **1. GATE Learning Tablet**
 - > Access high-quality classes at your convenience, anywhere and anytime with the tablet
- 2. Live Classroom Sessions
 - > Get Access to Live Classes By India's Leading GATE Faculty
- **3. Previous Year Question Books**
 - > 20+ Years PYQs with Solutions
- 4. Workbooks
 - > Access to 3000+ Practice Questions with solutions
- 5. Regular Quizzes
 - > Sample Quizzes for daily practice and regular tests along with live class
- 6. Doubt Resolution
 - > Complete Doubt Resolution within 24 hours by Subject Experts

Additional Offerings

- > Test Series Mock Tests based on GATE Exam pattern
- > Preparation Guidance Get a competitive advantage from our Experts
- Subject wise formula Notes Comprehensive short notes for Revision
- Report Card Regular performance analysis along with Live Class
