Society for Worldwide Interbank Financial Telecommunication (SWIFT)

Context

- The European Union, US, UK and allies have agreed to exclude a number of Russian banks from Swift, an international payment system used by thousands of financial institutions.

About the SWIFT

- The SWIFT system stands for the Society for Worldwide Interbank Financial Telecommunication.
- It is a secure platform for financial institutions to exchange information about global monetary transactions such as money transfers.
- It does not move money; it operates as a middleman to verify information of transactions by providing secure financial messaging services to more than 11,000 banks in over 200 countries.
- It is overseen by the central banks from eleven industrial countries: Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, the United Kingdom, and the United States, besides Belgium.
- **It is based in Belgium.**

Effects on Russia

- The statement from EU, the US, the UK and others said the move would "ensure that these banks are disconnected from the international financial system and harm their ability to operate globally".
- The aim is for Russian companies to lose access to the normally smooth and instant transactions provided by Swift.
- Payments for its valuable energy and agricultural products will be severely disrupted.
- Banks would be likely to have to deal directly with one another, adding delays and extra costs, and ultimately cutting off revenues for the Russian government.

Note:

- Prior to this, only one country had been cut off from SWIFT — Iran.

International Space Station (ISS)

Context

- A widely circulated comment by the chief of Russian space agency Dmitry Rogozin has ignited fears that the tension following Russia's invasion of Ukraine could have consequences for the International Space Station (ISS).

About International Space Station (ISS)

- It is a manmade space station, or a habitable artificial satellite, in low Earth orbit.
- The ISS has been in operation since 1998 and is expected to continue at least till 2028.
- However, Russia has indicated that it might pull out of the collaboration earlier, possibly by 2024.
- It is a joint project between five participating space agencies:
 - ✓ NASA (United States),
 - ✓ Roscosmos (Russia),
 - ✓ JAXA (Japan),
 - ✓ ESA (Europe),
 - ✓ CSA (Canada)

Facility

- The facility is used for carrying out a variety of zero-gravity experiments, space exploratory studies, and technology development.

Note:

- The ISS is not the first space station to be built and operated.
- Several smaller space stations have been used earlier, the most famous of which has been the Russian Mir space station that operated in the 1980s, and the American Skylab.

Reintroduction of Cheetah

Why in news

- Recently, an expert team of wildlife officials from Madhya Pradesh, the Indian Forestry department and the Wildlife Institute of India visited Namibia for a site visit for the transfer of Cheetah.
- It has been done under the action plan' launched at the 19th meeting of the National Tiger Conservation Authority (NTCA).

Provision of Action Plan

- The action plan states that a cohort of around 10-12 young cheetahs that are ideal for reintroduction would be imported from Namibia or South Africa as a founder stock during the first year.
- The animals' lineage and genetic history will be examined to ensure that they are not from an excessively inbred stock and are in the ideal age group so that they make up a suitable founding population.
- The proposed site for introduction is the Kuno Palpur National Park (KNP) in Madhya Pradesh, though at least three other reserves in Central India are being considered.

About Cheetah

- The scientific name of Cheetah is *Acinonyx Jubatus*.
- It is the fastest land animal.

Conservation Status

African Cheetah

- IUCN status - Vulnerable
- CITES status - Appendix-I of the List

Asiatic Cheetah

- IUCN Status - Critically Endangered.
- CITES status- Appendix-I of the List.

Note:

- In India, Cheetah was declared extinct in 1952. It is the only large mammal to have been declared extinct in our country in recorded history.
