Fridays for Future Campaign

Why in News:

- Climate change protests have been started in Germany and other countries by Friday for Future activists.

key points:

- As part of the Friday for the Future movement, more than 280,000 people took part in demonstrations in more than 270 cities and towns in Germany.

- As part of the Friday for the Future campaign, protesters are calling for a halt to global warming and calling on the German government to set up a 100-billion-euro fund to expand the use of renewable energy.
- These protests were organized 6 weeks before the start of the United Nations Climate Summit (COP27), which is scheduled to take place in Sharm el-Sheikh, Egypt.
- Similar protests have taken place in countries such as Italy, South Korea, the United States and the Democratic Republic of the Congo.
- Fridays for the Future is an international student movement that aims to move toward urgent climate action through active campaigning and advocacy.
- It was chosen as the champion of the earth because of its role in creating awareness about the adverse impact caused by the climate crisis.
- The movement was inspired by Greta Thunberg, who sat for three weeks in protest in front of the Swedish parliament to draw political attention to the climate emergency.

India has exported the first contingent of plant-based meat products

Why in News:

- APEDA has facilitated export of first batch of plant-based meat products from Gujarat to California, USA under vegetarian food category.

key points:

- Vegetarian food products are highly popular in developed countries due to their rich fiber, high nutrient content and low cholesterol levels.
- The first trove of plant-based meat products from India was exported by Greenest Foods, an Indian company based in Gujarat.
- This achievement has been achieved in association with Greenest Foods and Wholesome Foods.
- Amid the rise of conscious consumerism, smart proteins and plant-based meats have become extremely popular, especially among the younger generations.
- Adoption of a vegetarian lifestyle on a large scale can lead to the development of plant-based meat products, giving India an opportunity to become a major supplier in the international market.

- APEDA is currently targeting to export these products to Australia, Israel, New Zealand and other countries.
- These products will be promoted without disrupting the traditional animal-based meat export market.
- Popular consumer goods companies of India such as ITC and Tata Consumer Products are investing in this industry.
- Plant based food products from India are a very popular category in the international markets due to their ethical and value addition from food service operators and retailers.

India's first avalanche-monitoring radar installed in Sikkim

Why in News:

- India's first Avalanche Surveillance Radar has been installed in North Sikkim jointly by the Indian Army and Defense Geo-informatics and Research Establishment (DGRE).

key points:

- Avalanche radar can also be used to detect landslides, as well as avalanche detection.
- The first Avalanche Surveillance Radar in India has been installed in North Sikkim at an altitude of 15,000 feet.
- The radar has the capability to detect avalanches within three seconds of launch and will play a vital role in saving the lives of soldiers and reducing damage to property in high altitude areas.
- The radar employs a series of short microwave pulses, which are scattered over the target and can permanently scan the target slope for avalanches and track the path and shape of the avalanche.
- This radar can see snow, fog and even at night.
- It can cover an area of more than two square km and also obviates the need to deploy additional equipment in dangerous avalanche-prone areas.
- The radar is also linked to an alarm system, which enables automatic control and warning measures.
