Blossom shower, also called Cherry Blossom or Coffee Shower in Karnataka, is a local wind that blows in the interior of Karnataka (not in coastal Karnataka) in the hot weather season and this shower is good for coffee cultivation. The usual rainfall is of 25-40 mm from Feb-April. Coffee production in India is dominated in the hill tracts of South Indian states since coffee plant requires mild slope, less humidity etc.</p> <p>On the other hand, towards the close of the summer season, pre-monsoon showers are common especially, in Kerala and Karnataka. They help in the early ripening of mangoes, and are often referred to as ‘mango showers’ (source NCERT) which are around 70 mm in April in these regions.</p> <p>So correct answer is mango shower.</p>

113	A	8	B	63	C	108	A	<p>The correct answer is option "A". The photoelectric effect is the emission of electrons when electromagnetic radiation, such as light, hits a material and Photoelectric device means which uses photoelectric effect, in other words which produces electricity/electric signal from light. Photovoltaic cell is one such device. Other devices in the option are exactly opposite of this, in other words, they produce light on flow of electricity. For example, photoemitting or light emitting diodes emit light on flow of electricity i.e. reverse of photoelectric effect. Similarly, photodiode changes its electrical properties on receiving light. It is like light controlled switch which allows flow of electricity on getting light but it does not generate electricity.</p> <p>Diodes have p-n junction which allows flow of electricity in one direction only. In photodiode this p-n junction barrier under dark condition is on both sides which means no electricity will flow under dark condition - like an open switch. But under light, the p-n junction barrier on one side reduces allowing flow of electricity - like a closed switch. This way photodiode works but clearly it does not produce electricity on its own.</p> <p>Photovoltaic cells or commonly known as solar cells have vast use in digital technology. For example entire satellite communication depends on it since this is the main source of power for it.</p>
