Test Time	12:30 PM - 2:30 PM
Subject	Junior Engineer (Civil)

Section : Domain Questions

Q.1 A simple Pitot tube can be used to measure which of the following quantities?

1. Static head
2. Datum head
3. Dynamic head
4. Friction head
5. Total head

Ans 1. 1, 2 and 4
 2. 1, 3 and 5
 3. 2, 3 and 5
 4. 2, 3 and 4

Question ID : 630680197255
 Status : Answered
 Chosen Option : 2

Q.2 What is the minimum grade of concrete that is used in the case of reinforced cement concrete when exposed to a sea coast directly?

Ans 1. M25
 2. M40
 3. M20
 4. M30

Question ID : 630680197241
 Status : Marked For Review
 Chosen Option : 2

Q.3 Which of the following statements is correct when the marine deposits are under a very large depth of water?

- Ans
- 1. It has high effective stress and high shear strength
 - 2. It has low effective stress and low shear strength
 - 3. It has high effective stress and low shear strength
 - 4. It has low effective stress and high shear strength

Question ID : 630680197248
Status : Answered
Chosen Option : 4

Q.4 The maximum effective slenderness ratio of steel members always in tension (other than pre-tensioned members) is _____.

- Ans
- 1. 400
 - 2. 350
 - 3. 180
 - 4. 250

Question ID : 630680197274
Status : Answered
Chosen Option : 1

Q.5 Identify the contour map shown in the given figure.

- Ans
- 1. Depression
 - 2. Ridge
 - 3. Valley
 - 4. Saddle

Question ID : 630680197220
Status : Answered
Chosen Option : 1

Q.6 The flexural strength of concrete for M25 grade concrete as per IS : 456-2000 is:

- Ans
- 1. 3.0 N/mm²
 - 2. 2.5 N/mm²
 - 3. 3.5 N/mm²
 - 4. 2.0 N/mm²

Question ID : 630680197239
Status : Answered
Chosen Option : 3

Q.7 The angles of a triangle lie between _____ to form a well-conditioned triangle in a chain survey.

- Ans
- 1. 30° and 120°
 - 2. 15° and 135°
 - 3. 60° and 180°
 - 4. 20° and 150°

Question ID : 630680197218
Status : Answered
Chosen Option : 1

Q.8 As per the Central Pollution Control Board norms, the maximum permissible limit of 3 days biochemical oxygen demand at 27°C in wastewater effluent when discharged into an inland river or stream is _____.

- Ans
- 1. 30 mg/l
 - 2. 350 mg/l
 - 3. 500 mg/l
 - 4. 100 mg/l

Question ID : 630680197281
Status : Not Answered
Chosen Option : --

Q.9 The addition of chlorine at intermediate points generally at service reservoirs and booster pumping stations in water supply distribution is called _____.

- Ans
- 1. post-chlorination
 - 2. de-chlorination
 - 3. re-chlorination
 - 4. pre-chlorination

Question ID : 630680197288
Status : Marked For Review
Chosen Option : 1

Q.10 A cantilever rectangular beam has 40 mm width and 60 mm depth. If the cantilever is subjected to a point load of 6 kN at the free end and the bending stress is not to exceed 40 MPa, find the span of the cantilever beam.

- Ans**
- 1. 180 mm
 - 2. 210 mm
 - 3. 140 mm
 - 4. 160 mm

Question ID : 630680197231
Status : Answered
Chosen Option : 4

Q.11 Which of the following pairs is INCORRECTLY matched with respect to constituents of paint?

- Ans**
- 1. Solvent -> Naptha
 - 2. Base -> White lead
 - 3. Pigment -> Copper sulphate
 - 4. Vehicle -> Lithophone

Question ID : 630680197213
Status : Marked For Review
Chosen Option : 4

Q.12 A simply supported beam of 5 m carries a load of 100 kN on a bracket welded to the beam as shown in the given figure. Select the correct bending moment diagram of the beam.

Ans

Question ID : 630680197234
 Status : Answered
 Chosen Option : 4

Q.13 According to IS : 10500-2012, the maximum permissible limit of total alkalinity as calcium carbonate present in drinking water in the absence of an alternate source of water is:

- Ans
- 1. 1000 mg/l
 - 2. 200 mg/l
 - 3. 400 mg/l
 - 4. 600 mg/l

Question ID : 630680197280
 Status : Answered
 Chosen Option : 4

Q.14 A survey is to be made with a chain or tape having its true length L and its incorrect length L' . Let the actual volume be V and measured volume be V' . Then, the correction for volume is given by:

Ans

1. $V = V' \left[\frac{L}{L'} \right]^2$

2. $V = V' \left[\frac{L'}{L} \right]^2$

3. $V = V' \left[\frac{L'}{L} \right]^3$

4. $V = V' \left[\frac{L}{L'} \right]^3$

Question ID : 630680197221
Status : Answered
Chosen Option : 3

Q.15 What is the function of the chemical SO_3 present in Ordinary Portland cement?

Ans

1. Imparts colour and hardness

2. Makes cement sound

3. Responsible for quick setting

4. Gives strength

Question ID : 630680197212
Status : Answered
Chosen Option : 2

Q.16 When a rectangular lamina is immersed in water at a depth of 75 mm vertically, what is the depth of centre of pressure of the lamina?

Ans

1. 112.5 mm

2. 18.75 mm

3. 37.5 mm

4. 50.0 mm

Question ID : 630680197254
Status : Answered
Chosen Option : 4

Q.17 Which of the following is the performance efficiency of slow sand filter?

1. It removes about 98 to 99% bacteria.
2. It removes turbidity to the extent of 50 PPM.
3. It does not remove colour of raw water.
4. It removes about 95% colloidal matter.

- Ans
- 1. 1 and 2
 - 2. 3 and 4
 - 3. 2 and 3
 - 4. 1 and 4

Question ID : 630680197286
Status : Answered
Chosen Option : 3

Q.18 All the following are the assumptions made in Terzaghi's theory of consolidation EXCEPT:

- Ans
- 1. Darcy's law is valid throughout the consolidation process
 - 2. the coefficient of permeability of soil varies at all points during the entire period of consolidation
 - 3. the soil is fully saturated
 - 4. the soil is homogeneous and isotropic

Question ID : 630680197249
Status : Answered
Chosen Option : 2

Q.19 The phenomenon of producing higher stresses near the junction of a web and lower stresses at points away from the web of a steel beam is known as _____.

- Ans
- 1. elastic critical moment
 - 2. moment of resistance
 - 3. shear lag
 - 4. lateral buckling

Question ID : 630680197277
Status : Marked For Review
Chosen Option : 3

Q.20 A rectangular column is 150 mm and 100 mm thick and carries a load of 150 kN at an eccentricity of 10 mm in a plane bisecting the thickness. Find the maximum and minimum intensities of stress in the section.

- Ans**
- 1. 24 MPa and 10 MPa
 - 2. 14 MPa and 6 MPa
 - 3. 18 MPa and 8 MPa
 - 4. 10 MPa and 4 MPa

Question ID : 630680197233
Status : Answered
Chosen Option : 2

Q.21 For a simply supported beam, the restraint against torsional rotations at supports may be provided by:

1. Web of flange cleats
2. Vertical stiffeners
3. Lateral end frames

Which of the above mentioned points correctly completes the given statement?

- Ans**
- 1. 1, 2 and 3
 - 2. 1 and 2
 - 3. 2 and 3
 - 4. 1 and 3

Question ID : 630680197278
Status : Marked For Review
Chosen Option : 1

Q.22 Match the type of levelling with its application.

Type of levelling	Process
1. Simple levelling	A. When the differential levelling is done in order to connect a benchmark to the starting point of the alignment of project
2. Differential levelling	B. When the difference of level between two points is determined by setting the level instrument midway between two points
3. Fly levelling	C. The process of taking levels transverse to the direction of longitudinal levelling
4. Cross-sectional levelling	D. When the difference of elevation between the points is large and there are obstacles between the points

- Ans
- 1. 1-B; 2-C; 3-A; 4-D
 - 2. 1-B; 2-D; 3-A; 4-C
 - 3. 1-C; 2-D; 3-A; 4-B
 - 4. 1-B; 2-A; 3-D; 4-C

Question ID : 630680197223
Status : Marked For Review
Chosen Option : 4

Q.23 Which of the following objectives of seasoning of wood is INCORRECT?

1. Reduce the shrinkage and warping after placement in the structure
2. Increase strength, durability and workability
3. Increase its weight
4. Make it difficult to paint

- Ans
- 1. 1 and 3
 - 2. 1 and 2
 - 3. 2 and 3
 - 4. 3 and 4

Question ID : 630680197211
Status : Answered
Chosen Option : 4

Q.24 As per IS : 456-2000, what is the recommended value of effective length of RCC compression member of unsupported length l that is effectively held in position and restrained against rotation at one end and at the other restrained against rotation but not held in position?

- Ans
- 1. $1.2 l$
 - 2. $2.0 l$
 - 3. $1.5 l$
 - 4. $0.65 l$

Question ID : 630680197272
Status : Answered
Chosen Option : 1

Q.25 The bars of nominal diameter 16 mm used in compression for an RCC work consists of M30 grade concrete for which design bond stress is 1.5 N/mm^2 . The stress in bars at design load is 50 N/mm^2 . What is the development length bars as per IS : 456-2000?

- Ans
- 1. 112.55 mm
 - 2. 105.82 mm
 - 3. 108.5 mm
 - 4. 100.5 mm

Question ID : 630680197269
Status : Not Answered
Chosen Option : --

Q.26 The water content of a soil sample can be determined by:

- Ans
- 1. hydrometer method
 - 2. pipette method
 - 3. one-point method
 - 4. pycnometer method

Question ID : 630680197245
Status : Answered
Chosen Option : 4

Q.27 Which of the following beams is an indeterminate beam?

- Ans
- 1. One end hinge and other end roller beam
 - 2. Continuous beam
 - 3. Simply supported beam
 - 4. Cantilever beam

Question ID : 630680197261
Status : Answered
Chosen Option : 2

Q.28 Which of the following is independent of the properties of water with respect to permeability?

- Ans
- 1. Coefficient of hydraulic conductivity
 - 2. Coefficient of absolute permeability
 - 3. Coefficient of percolation
 - 4. Coefficient of permeability

Question ID : 630680197247
Status : Marked For Review
Chosen Option : 1

Q.29 The distribution factor of BC and CB of the continuous beam shown in the given figure are _____, respectively.

- Ans
- ✓ 1. $DF_{BC} = 0.64$ and $DF_{CB} = 1$
 - ✗ 2. $DF_{BC} = 0.64$ and $DF_{CB} = 0.36$
 - ✗ 3. $DF_{BC} = 0.56$ and $DF_{CB} = 0.44$
 - ✗ 4. $DF_{BC} = 0.5$ and $DF_{CB} = 0.5$

Question ID : 630680197264
 Status : Marked For Review
 Chosen Option : 2

Q.30 A 90° triangular weir is used to measure the discharge (Q) of a canal with the head of water H. The theoretical discharge is computed by:

- Ans
- ✗ 1. $Q_{th} = \frac{8}{15} \tan \theta \sqrt{2gH}$
 - ✗ 2. $Q_{th} = \frac{8}{15} \tan \frac{\theta}{2} \sqrt{2gH^{\frac{5}{2}}}$
 - ✓ 3. $Q_{th} = \frac{8}{15} \tan \frac{\theta}{2} H^{\frac{5}{2}} \sqrt{2g}$
 - ✗ 4. $Q_{th} = \frac{8}{15} \tan \theta H^{\frac{5}{2}} \sqrt{2g}$

Question ID : 630680197258
 Status : Answered
 Chosen Option : 4

Q.31 What should be the minimum sample size for the flakiness index test for aggregate?

- Ans
- ✗ 1. 50 pieces
 - ✓ 2. 200 pieces
 - ✗ 3. 300 pieces
 - ✗ 4. 100 pieces

Question ID : 630680197216
 Status : Marked For Review
 Chosen Option : 2

Q.32 Which of the following rock types belongs to the igneous rock group?

- Ans
- 1. Shale
 - 2. Marble
 - 3. Rhyolite
 - 4. Schist

Question ID : 630680197210
Status : Marked For Review
Chosen Option : 4

Q.33 The maximum monthly demand of water per head is equal to:

- Ans
- 1. $1.28 \times$ (Annual average monthly demand of water)
 - 2. $2.7 \times$ (Annual average hourly demand of water per head)
 - 3. Annual average monthly demand of water
 - 4. $1.8 \times$ (Annual average daily demand of water)

Question ID : 630680197282
Status : Answered
Chosen Option : 4

Q.34 A simply supported beam carrying a uniformly distributed load of 10 kN/m is shown in the given figure. Determine the distance at which shear force is equal to zero from point C.

- Ans
- 1. 1.5 m
 - 2. 1.0 m
 - 3. 1.2 m
 - 4. 1.7 m

Question ID : 630680197230
Status : Answered
Chosen Option : 3

Q.35 According to IS : 456-2000, the maximum permissible limit of chlorides (as Cl) present in the water that is used for mixing concrete with embedded steel is:

- Ans
- 1. 3000 mg/l
 - 2. 500 mg/l
 - 3. 2000 mg/l
 - 4. 200 mg/l

Question ID : 630680197236
Status : Answered
Chosen Option : 3

Q.36 Which of the following conditions of soils, the Vane shear test conducted in the laboratory to determine the shear strength is applicable?

- Ans**
- 1. Undrained shear strength of soft clays
 - 2. Drained shear strength of soft clays
 - 3. Drained shear strength of stiff clays
 - 4. Undrained shear strength of problematic soils

Question ID : 630680197250
Status : Answered
Chosen Option : 1

Q.37 Identify whether the following statements related to concrete mix are correct or incorrect.

Statement 1: Nominal mix concrete may be used for concrete of M 25 or higher grade.

Statement 2: The mix shall be designed to produce the grade of concrete having the required workability and a characteristic strength.

- Ans**
- 1. Statement 1 is incorrect but Statement 2 is correct
 - 2. Both statements are incorrect
 - 3. Statement 1 is correct but Statement 2 is incorrect
 - 4. Both statements are correct

Question ID : 630680197242
Status : Answered
Chosen Option : 1

Q.38 What is the dimension of dynamic viscosity of fluid?

- Ans**
- 1. $ML^{-1}T^{-2}$
 - 2. $M^{-1}L^{-1}T^{-1}$
 - 3. MLT^{-2}
 - 4. $ML^{-1}T^{-1}$

Question ID : 630680197253
Status : Answered
Chosen Option : 4

Q.39 The magnetic bearing of a line is $135^{\circ} 30'$. What is the true bearing if the declination is $5^{\circ} 15' W$?

- Ans**
- 1. $140^{\circ} 45'$
 - 2. $130^{\circ} 15'$
 - 3. $115^{\circ} 45'$
 - 4. $120^{\circ} 15'$

Question ID : 630680197219
Status : Answered
Chosen Option : 2

Q.40 For discharge Q , the specific speed of a pump is N_s . For half discharge with the same head, the specific speed will be:

- Ans
- 1. $N_s\sqrt{2}$
 - 2. $\frac{N_s}{\sqrt{2}}$
 - 3. $2N_s$
 - 4. $\frac{N_s}{2}$

Question ID : 630680197260
Status : Answered
Chosen Option : 1

Q.41 According to IS : 456-2000, for a cantilever beam, the clear distance from the free end of the cantilever to the lateral restraint shall not exceed _____ (where d is the effective depth of the beam and b is the breadth of the compression face midway between the lateral restraints).

- Ans
- 1. $60 b$ or $\frac{250b^2}{d}$ whichever is less
 - 2. $25 d$ or $\frac{100d^2}{b}$ whichever is less
 - 3. $25 b$ or $\frac{100b^2}{d}$ whichever is less
 - 4. $60 d$ or $\frac{250d^2}{b}$ whichever is less

Question ID : 630680197268
Status : Answered
Chosen Option : 3

Q.42 Which of the following options related to bituminous materials manufacturing is correct?

1. Bitumen is a crystalline solid material derived from petroleum, by natural or refinery process.
2. Tar is produced by the destructive distillation of organic materials such as coal, oil, lignite and wool.

- Ans
- 1. Statement 1 is correct but Statement 2 is incorrect
 - 2. Statement 1 is incorrect but Statement 2 is correct
 - 3. Both statements are correct
 - 4. Both statements are incorrect

Question ID : 630680197214
Status : Answered
Chosen Option : 2

Q.43 The maximum hydraulic efficiency for a Pelton turbine with exit angle ϕ is given by:

Ans

1. $\left(1 + \frac{\cos\phi}{2}\right)$

2. $\left(\frac{1 + \cos\phi}{2}\right)$

3. $\left(\frac{1 - \cos\phi}{2}\right)$

4. $\left(1 - \frac{\cos\phi}{2}\right)$

Question ID : 630680197259

Status : Answered

Chosen Option : 2

Q.44 Identify the type of truss shown in the given figure.

Ans 1. Perfect truss

2. Deficient truss

3. Space truss

4. Redundant truss

Question ID : 630680197262

Status : Answered

Chosen Option : 4

Q.45 When concrete surfaces are exposed to alternate wetting and drying, the exposure condition is called _____.

Ans 1. severe

2. moderate

3. extreme

4. mild

Question ID : 630680197240

Status : Answered

Chosen Option : 1

Q.46 A circular compression specimen having a cross-sectional area of 100 mm^2 and section modulus of 200 mm^3 carries a load of 100 kN at an eccentricity of 10 mm , as shown in the given figure. What is the maximum stress induced in the section?

- Ans
- 1. 4000 N/mm^2
 - 2. 5000 N/mm^2
 - 3. 6000 N/mm^2
 - 4. 7000 N/mm^2

Question ID : 630680197267

Status : Answered

Chosen Option : 3

Q.47 Match the following possible failure modes of an axially loaded column with their correct occurrence.

Failure modes of column	Occurrence
1. Local buckling	A. Occurs by excessive deflection in the plane of the weaker principal axis
2. Squashing	B. Occurs by buckling of one or more individual plate elements
3. Overall flexural buckling	C. Occurs by twisting about the shear centre in the longitudinal axis
4. Flexural-torsional buckling	D. Occurs when the length is relatively small (stocky column)

- Ans
- 1. 1-B; 2-D; 3-A; 4-C
 - 2. 1-B; 2-C; 3-A; 4-D
 - 3. 1-B; 2-A; 3-D; 4-C
 - 4. 1-C; 2-D; 3-A; 4-B

Question ID : 630680197279

Status : Marked For Review

Chosen Option : 1

Q.48 Match the following sewer components with their functions.

Types of sewer	Functions
1. Catch pits	A. Used to check the obstruction in the sewer
2. Flushing tanks	B. Used to collect stormwater from the roadside
3. Lamp holes	C. Used to collect grit, sand and debris
4. Gullies	D. Used to clean the sewer by removing blockages

- Ans
- 1. 1-B, 2-D, 3-A, 4-C
 - 2. 1-A, 2-D, 3-C, 4-B
 - 3. 1-C, 2-A, 3-D, 4-B
 - 4. 1-C, 2-D, 3-A, 4-B

Question ID : 630680197287

Status : Answered

Chosen Option : 4

Which of the following statements related to Tacheometric survey is correct?

1. Reduction diagrams are used for measuring corrections for horizontal and vertical distances directly.
2. Tacheometric tables are prepared for 1 m staff intercept when staff is held vertically and constants are 100 and 0.

- Ans
- 1. Statement 2 is correct
 - 2. Neither of the statements is correct
 - 3. Statement 1 is correct
 - 4. Both statements are correct

Question ID : 630680197226
Status : Not Answered
Chosen Option : --

Q.50 Which of the following conditions should satisfy for the formation of supercritical flow in an open channel?

- Ans
- 1.
When the depth of flow in a channel is greater than critical depth and Froude's number is less than 1
 - 2.
When the depth of flow in a channel is greater than critical depth and Froude's number is greater than 1
 - 3.
When the depth of flow in a channel is less than critical depth and Froude's number is greater than 1
 - 4.
When the depth of flow in a channel is equal to critical depth and Froude's number is equal to zero

Question ID : 630680197257
Status : Answered
Chosen Option : 3

Q.51 According to IS : 4111-1986, the spacing of manholes above _____ may be allowed on straight runs for sewers of diameter above 900 to 1500 mm.

- Ans
- 1. 200 to 300 m
 - 2. 30 to 100 m
 - 3. 90 to 150 m
 - 4. 150 to 200 m

Question ID : 630680197284
Status : Not Answered
Chosen Option : --

Q.52 According to IS : 456-2000, what is the required slump value for placing the concrete in lightly reinforced sections in slabs, beams and column?

- Ans
- 1. 100-150 mm
 - 2. 10-25 mm
 - 3. 75-100 mm
 - 4. 25-75 mm

Question ID : 630680197238
Status : Marked For Review
Chosen Option : 3

Q.53 When the available length is less than the required length of a tension member, _____ are provided.

- Ans
- 1. lug angles
 - 2. splices
 - 3. column bases
 - 4. gusset plates

Question ID : 630680197275
Status : Answered
Chosen Option : 4

Q.54 Which of the following is NOT an objective of varnishing a surface?

- Ans
- 1. To render brilliancy to the painted surface
 - 2. To protect the painted surface from atmospheric actions
 - 3. To enhance the aesthetic appearance of a painted metal
 - 4. To brighten the appearance of the grain in wood

Question ID : 630680197215
Status : Marked For Review
Chosen Option : 1

Q.55 Cement that has _____ is the most suitable for achieving higher ultimate strength in a given application.

- Ans
- 1. very little gypsum
 - 2. a high C_2S content
 - 3. a high C_3S content
 - 4. a high C_3A content

Question ID : 630680197235
Status : Answered
Chosen Option : 2

Q.56 Which of the following statements is correct in the case of a singly reinforced concrete beam?

- Ans
- 1. Elastic moduli for concrete and steel have different values within the limits of deformation of the beam.
 - 2. Steel possesses initial stresses when embedded in concrete.
 - 3. Plane sections transverse to the centre line of the beam before bending, remain plane after bending.
 - 4. Compression is borne by the concrete.

Question ID : 630680197270
Status : Answered
Chosen Option : 3

Q.57 An equilateral triangular section ABC has a base width of 80 mm and height of 60 mm. The moment of inertia about the base BC is:

- Ans
- 1. $360 \times 10^3 \text{ mm}^4$
 - 2. $650 \times 10^3 \text{ mm}^4$
 - 3. $1440 \times 10^3 \text{ mm}^4$
 - 4. $1260 \times 10^3 \text{ mm}^4$

Question ID : 630680197229
Status : Answered
Chosen Option : 3

Q.58 The ratio of lateral strain to longitudinal strain is called _____.

- Ans
- 1. Young's modulus of elasticity
 - 2. Bulk modulus
 - 3. Poisson's ratio
 - 4. Shear modulus

Question ID : 630680197227
Status : Answered
Chosen Option : 3

Q.59 A beam of the triangular section having a base width of 100 mm and height of 150 mm is subjected to a shear force of 15 kN. Find the value of the maximum shear stress.

- Ans
- 1. 4 MPa
 - 2. 5 MPa
 - 3. 2 MPa
 - 4. 3 MPa

Question ID : 630680197232
Status : Answered
Chosen Option : 4

Q.60 Which of the following conditions is valid in the case of flow through parallel pipes?

Ans 1.

The velocity of flow in the main line is equal to the sum of the velocities in each of the parallel pipes.

2.

The rate of discharge in the main line is not equal to the sum of the discharges in each of the parallel pipes.

3. The loss of head in each parallel pipe is different.

4.

The rate of discharge in the main line is equal to the sum of the discharges in each of the parallel pipes.

Q.65 A simply supported beam of span l carries a point load W at the centre (as shown in the given figure) and has a flexural rigidity of EI . What are the maximum slope and deflection of the beam?

Ans 1.

$max. slope = \frac{Wl^2}{16EI}$ and $max. deflection at centre = \frac{Wl^3}{48EI}$

2.

$max. slope = \frac{Wl^4}{16EI}$ and $max. deflection at centre = \frac{Wl^2}{16EI}$

3.

$max. slope = \frac{Wl^2}{6EI}$ and $max. deflection at centre = \frac{Wl^3}{8EI}$

4.

$max. slope = \frac{Wl^3}{48EI}$ and $max. deflection at centre = \frac{Wl^2}{16EI}$

Chosen Option : 3

Comprehension:

Read the given passage and answer the questions that follow.

They say that the colour of revolution is red. Not always. Sometimes, it's blue. It was the summer of 1859 in Bengal when thousands of ryots (peasants) refused to grow indigo for the European planters (owners of land and indigo factories). It was a show of rage and undying resolve. It became one of the most remarkable peasant movements of Indian history. It came to be called the Neel Bidroha or the Indigo Revolt.

Indigo was being cultivated in Bengal since the end of the 18th century. It was practiced mainly in two forms, the Nij-abad and the Ryoti. In the Nij or 'own' system, the planter produced indigo on lands that he directly controlled. In the Ryoti cultivation, the ryots cultivated indigo on their own lands as part of a contract with the planters. Ryoti was the predominant form of indigo cultivation in Bengal. The ryots sowed indigo under a contract system. It extended to a period of either one, three to five or ten years. At the inception of the contract, the planter made an advance payment to the ryot to meet the expenses of cultivation. In return, the ryot agreed to cultivate indigo on his land. The system of indigo cultivation was inherently exploitative. Emerging in 1859 in the Nadia district, the Bidroha spread to in different districts of Bengal in the 1860s. The peasants attacked indigo factories with spears and swords. Planters who demanded rent were beaten. Even women participated by fighting with pots and pans. It was especially powerful in the Pabna district where the ryots vehemently refused to sow indigo.

SubQuestion No : 8

Q.8 What is the main theme of the passage?

- Ans**
- 1. Indigo revolt in Bengal
 - 2. Ryoti system in Indigo cultivation
 - 3. Exploitation of Indigo farmers
 - 4. Indigo plantation in Bengal

Status : Answered

Chosen Option : 4

Comprehension:

Read the given passage and answer the questions that follow.

They say that the colour of revolution is red. Not always. Sometimes, it's blue. It was the summer of 1859 in Bengal when thousands of ryots (peasants) refused to grow indigo for the European planters (owners of land and indigo factories). It was a show of rage and undying resolve. It became one of the most remarkable peasant movements of Indian history. It came to be called the Neel Bidroha or the Indigo Revolt.

Indigo was being cultivated in Bengal since the end of the 18th century. It was practiced mainly in two forms, the Nij-abad and the Ryoti. In the Nij or 'own' system, the planter produced indigo on lands that he directly controlled. In the Ryoti cultivation, the ryots cultivated indigo on their own lands as part of a contract with the planters. Ryoti was the predominant form of indigo cultivation in Bengal. The ryots sowed indigo under a contract system. It extended to a period of either one, three to five or ten years. At the inception of the contract, the planter made an advance payment to the ryot to meet the expenses of cultivation. In return, the ryot agreed to cultivate indigo on his land. The system of indigo cultivation was inherently exploitative. Emerging in 1859 in the Nadia district, the Bidroha spread to in different districts of Bengal in the 1860s. The peasants attacked indigo factories with spears and swords. Planters who demanded rent were beaten. Even women participated by fighting with pots and pans. It was especially powerful in the Pabna district where the ryots vehemently refused to sow indigo.

SubQuestion No : 10

Q.10 'Ryoti was the predominant form of indigo cultivation in Bengal'. The word 'predominant' means:

- Ans
- 1. conventional
 - 2. normal
 - 3. cheap
 - 4. main
